

Electronics Engineering & Manufacturing

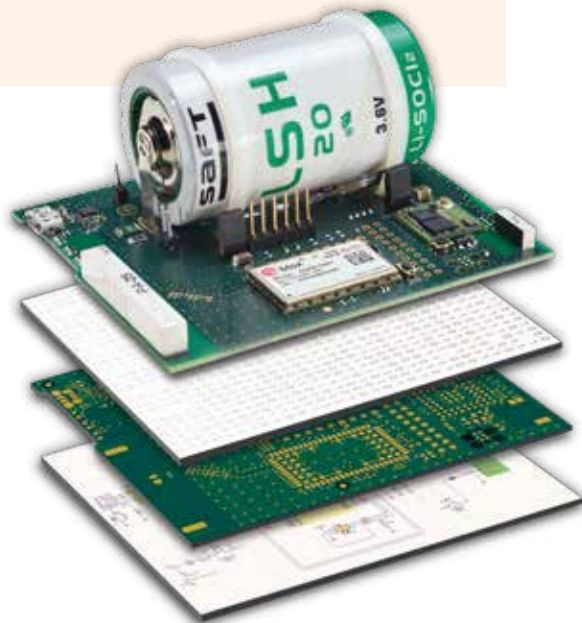

Your partner in Engineering and EMS.

About WEPTECH elektronik

We are specialized in wireless technologies and provide E²MS services for the development and production of radio assemblies and systems (E²MS - Electronics Engineering & Manufacturing Services).

Hardware and Software Engineering

- > Antenna simulation & design
- > Prototype development
- > PCB layout according to IPC standards
- > Certification

Manufacturing & Assembly

- > SMT & THT assembly
- > LGA, BGA, Fine Pitch technology and mixed assembly
- > Voidfree LGA soldering
- > Nano coating & Potting
- > X-Ray analysis
- > Test & Mounting
- > Traceability

Technologies

We have succeeded for years by offering our customers individual wireless solutions. Therefore we have extensive know-how in a wide range of technologies.

LoRaWAN

Products

Radio modules

Sensors

Repeater

Gateways

Development Kits available

The development kits for our radio modules are an easy and fast way to start with the testing and development. It is purposed to have an easy access to all connections of the modules. Find further information on the respective websites of the modules.
